

HIGH-YIELD TECH STACKS: CURRICULUM OPTIMIZATION

ANALYSIS OF THE 2024-2025 STACK OVERFLOW SURVEY

NAME: Fatema Alsabah

DSB-2

INTRODUCTION & BACKGROUND:

INDUSTRY CONTEXT

The technology sector moves at a rapid pace, making it difficult to separate temporary trends from true market shifts.

MARKET FEEDBACK

This project analyzes real-world market feedback from thousands of software developers across the United States.

ANALYSIS SCOPE

Comparative analysis of 2024 and 2025 data to identify programming language demand and compensation shifts

PROBLEM STATEMENT & PROJECT GOALS:

THE CHALLENGE

Coding bootcamps struggle to keep curricula relevant, leaving graduates with outdated skills and lower competitiveness.

CORE QUESTION

Which programming languages offer the highest highest median pay and the strongest salary growth growth in the current US market?

PROJECT GOALS

- Identify the languages with the highest salaries salaries and fastest pay growth.
- Discover the relationship between education education level and highest median compensation.
- Pinpoint the best, most secure starting skills for skills for junior developers (0–2 years of experience).

DATA & METHODOLOGY:

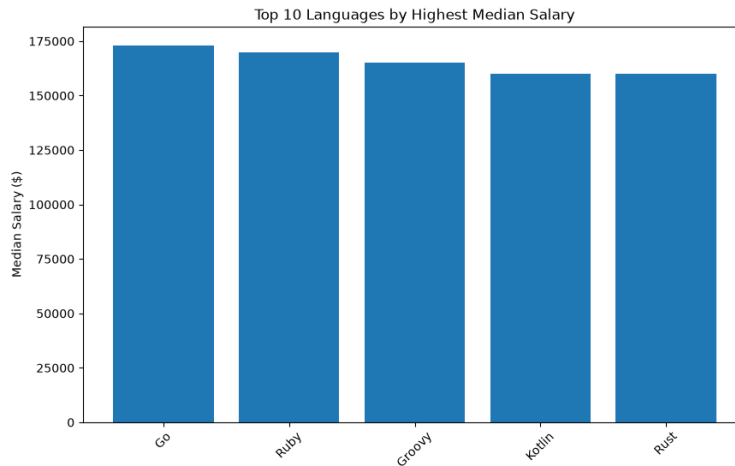

DATA SOURCE

Stack Overflow Developer Survey (2024-2025).
Filtering for professional developers and entry-level pipelines.

DATA SCOPE

Isolated to the United States to control for global wage disparities.
Considered education level and years of experience.

FOUNDATIONAL DATA PROOF

AGENDA: ROADMAP FOR CURRICULUM OPTIMIZATION

01

FOUNDATIONAL BUILDING BLOCKS

02

2024-2025 HIGHEST MEDIANS AND GROWTH PERCENTAGES

03

EDUCATION LEVEL AND EXPERIENCE EFFECT ON MEDIANS

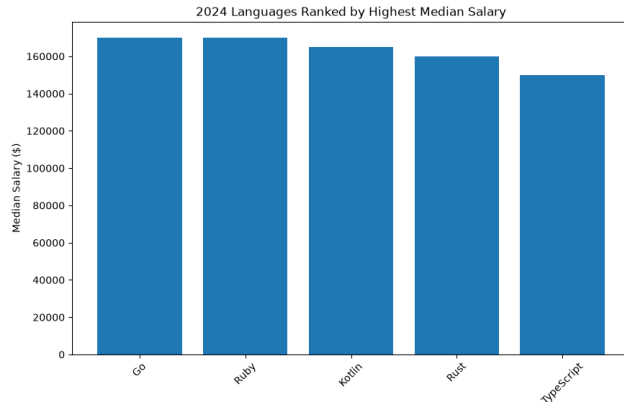

04

STRATEGIC RECOMMENDATIONS

DEEP DIVE: MEDIAN SALARIES OF 2024 AND 2025

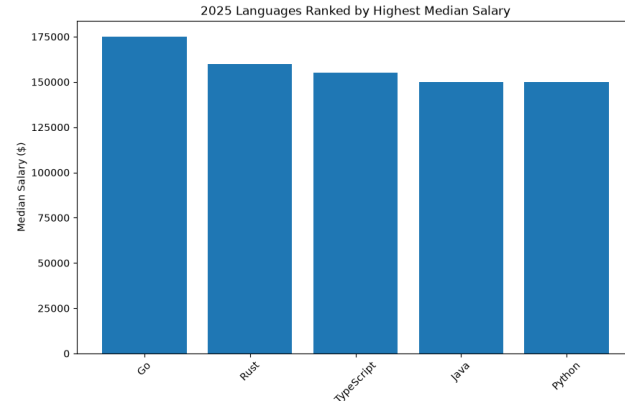

2024 MARKET SNAPSHOT

Languages like GO, Ruby and Kotlin had the highest median in 2024.

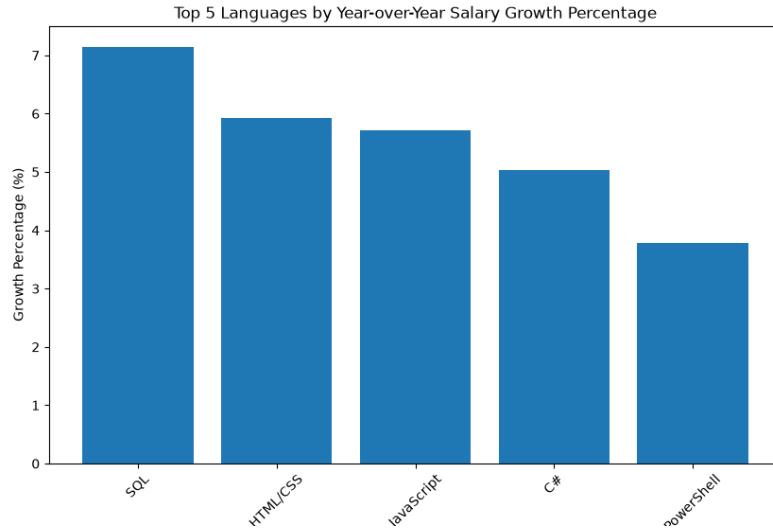

2025 MARKET SNAPSHOT

In 2025 GO still had the highest median in the United States.

DEEP DIVE: MOMENTUM FOR FUTURE-PROOF SKILLS

SQL, HTML/CSS, and JavaScript have had the highest growth percentage between 2024 and 2025

This highlights market momentum and tells us which skills are gaining financial power.

DEEP DIVE: ENTRY-LEVEL EXPERIENCE

Education level	Highest 2024 median	Highest 2025 median	Highest growth percentage
Bachelor's degree	Elixir	Scala	Dart
Master's degree	Ada	Scala	MATLAB
Associate degree	Scala	Scala	Prolog
Professional degree	F#	OCaml	PHP
Secondary / elementary school	Groovy	Elixir	Assembly
No degree / other	Scala	Go	Prolog

DEEP DIVE: CORE FOUNDATIONS AS BUILDING BLOCKS

Years of experience	Highest 2024 median	Highest 2025 median	Highest growth percentage
0-2 years	Bash/Shell (all shells)	Bash/Shell (all shells)	Bash/Shell (all shells)

SUMMARY :

- True Language Value Discovered: By separating individual languages, common "passenger skills" were stopped from artificially looking high-paying.
- Real Growth Verified: By enforcing a threshold of respondents in both 2024 and 2025, random statistical flukes were eliminated, proving that the top 10 growth languages are gaining real market value.
- Experience Wins Over Degrees: When comparing career progression, it was discovered that hands-on work experience increases median salaries at a much faster and higher rate than earning an advanced university degree.

RECOMMENDATIONS:

- Focus on Growth Ecosystems: To maximize future income, learning should be targeted at the specific high-growth technologies found in the top 10 list.
- Prioritize Early Industry Entry: For individuals choosing between more schooling or entering the job market, it was discovered that securing real-world work experience provides a faster and higher financial return than chasing consecutive degrees.
